## The Saab Seaeye Gripstick

Underwater single  
function 3 jaw manipulator

This single function manipulator has three 100 mm stainless steel jaws enabling vertical or horizontal objects to be grasped without the need of the rotate function required with traditional two jaw manipulators.

Particularly useful for freeing trapped umbilical cables, light recovery tasks or attaching a line, we recommend this device as the first choice of accessory to add to the vehicle.

This tool can also be used to cut 9 mm diameter rope with the simple installation of a craft or 'Stanley Knife' blade that remains fully protected while the jaws are closed.

Open and close of the jaws is controlled on the Falcon hand controller.
